Objective 1.2: Schools help all students make successful transitions to college and careers.

Our Role. The Education Department provides national leadership to improve the quality of career and technical, adult, and workforce education. The programs administered through the Office of Vocational and Adult Education (OVAE) help secondary, postsecondary, and adult education students gain the academic and technical knowledge needed to succeed in further education, careers, and citizenship. They promote education reform and improvement, and accountability for results. The joint Education Department/Department of Labor School-to-Work initiative sunsets in 2001.

Our Performance

Indicator 1.2.a. By fall 2000, 1 million youths will participate annually in School-to-Work (STW) Systems.

Assessment of Progress. There has been positive progress toward the goal. The goal for 1999 was exceeded. “Participants” are defined as students who take integrated academic and vocational coursework and participate in work-based learning. In 1999, 754,438 students participated in the STW Systems, exceeding the goal of 750,000. The data for 2000 are not available.

Figure 1.2.a.1

Indicator 1.2.b. By fall 2000, the percentage of vocational concentrators completing core curriculum standards will double from baseline data.

Assessment of Progress. There has been progress toward the goal. The previous goal set for 2002 was 33 percent; this was raised to 55 percent because the previous goal had already been achieved. “Core curriculum standards” include four years of English and three years each of math, science, and social studies. This course sequence is the basis for a postsecondary preparatory curriculum. Data for 2000 are not available.
Indicator 1.2.c. By fall 2000, the percentage of high school graduates, including vocational concentrators, who make a successful transition into employment, further education, or the military, will increase to 92 percent.

Assessment of Progress. Progress toward the goal is likely, as both groups of students (i.e. all students and vocational concentrators) approached the goal in 1998. Eighteen months after graduating from high schools that participate in School-To-Work systems, 55 percent of 1998 graduates were enrolled in a 2-year or 4-year college, six percent were in other postsecondary training programs or the military, and 29 percent were employed full time. Overall, 90 percent of all students were enrolled in postsecondary education or the military or were employed full time. A similar proportion of vocational concentrators made successful transitions, although these students were less likely to be enrolled in postsecondary study and more likely to be employed full time. The data for 2000 are not available.
Indicator 1.2.d. By fall 2000, ten percent of students in local School-To-Work Systems will earn skill certificates.

Assessment of Progress. The goal is unlikely to have been met. The upward trend reversed in 1999, with a change from 4.2 percent in 1998 to 2.3 percent in 1999. The data for 2000 are not available.

Indicator 1.2.e. By fall 2001, 200 high schools will receive and 2,500 will be working toward Departmental recognition for implementing New American High School (NAHS) strategies that combine career and academic preparation.

Assessment of Progress. Progress occurred, although the goal for 2000 was not met. As of 2000, 59 high schools received NAHS recognition and 1,077 schools were working with three high school reform networks to implement NAHS strategies. High school reform networks include High Schools That Work, Sonoma State University—California State Department of Education, and Jobs for the Future (JFF).

Source: NAHS application tracking documents. Frequency: Annual. Next Update: 2001 for 2000-01 data. Validation procedure: Data collection processes were developed before the Education Department standards for evaluating the quality of program performance data were developed. Limitations of data and planned improvements: No data limitations are noted.

Indicator 1.2.f. By fall 2000, 350,000 employers participating in School-to-Work systems will offer work-based learning opportunities.

Assessment of Progress. Achieving the goal is unlikely, as the upward trend reversed direction in 1999 from 178,000 in 1998 to 154,543. The data for 2000 are not available.

Source: Progress Measures Survey. Frequency: Annual. Next Update: 2001 for 1999-2000 school year data. Validation procedure: Case studies in four states are underway to examine the process by which local partnerships gather the information reported in their progress reports. Limitations of data and planned improvements: The nature of work-based learning experiences may differ considerably across employers.
