Introduction

“Raise the Bar: Lead the World” is the U.S. Department of Education’s call to action to transform public education and unite around what truly works — based on decades of experience and research — to advance education equity and excellence. Achieving academic excellence for all students by supporting the conditions to accelerate learning and offering a comprehensive and rigorous education, as well as boldly improving learning conditions, are key focus areas under Raise the Bar, with a focus on assisting states and districts in achieving these goals for every student.

We believe parents, families, and caregivers are essential partners in supporting student success. Research finds that strong partnerships between home and school lead to increased academic success and engagement for students. Thus, the U.S. Department of Education is committed to Raising the Bar for Parent Partnership in Our Schools.

We know students who are chronically absent — meaning they miss at least 18 days of school in a year — are at serious risk of falling behind. Even before the pandemic, 8 million students fit into this category. Now, the numbers are even worse: some estimates show that the number of students chronically absent doubled to 16 million in 2021-22, affecting one in three students nationwide. There are no easy solutions to this problem, but family engagement practices offer some promise when it comes to improving attendance and student engagement.
Dr. Mapp’s **Dual Capacity-Building Framework** highlights that strong family-school partnerships and engaging families helps ensure that children show up to school every day. Also highlighted was a recent analysis by the Kansas Technical Assistance System Network that explored the correlation between family engagement and chronic absenteeism, as well as between chronic absenteeism and student performance on statewide assessments. Findings revealed:

- Higher levels of family engagement are associated with better attendance.
- Schools that share power and advocacy, as well as create welcoming environments, have lower levels of chronic absenteeism.
- Student attendance impacts achievement. Lower levels of chronic absence translate to higher levels of achievement in math and language arts.

### Understanding Chronic Absenteeism

- Chronic absence is characterized by missing 10% or more of school for any reason, whether it is excused, unexcused, or due to suspensions. This translates to about two days of absences per month in school. This is a helpful early warning metric that can be used throughout the year to illuminate which students, populations, and schools need more support.

- Chronic absence measures time missed from school for any reason and is not the same as truancy, unexcused absences, or average daily attendance, which is the number of students who show up to school each day.

### When kids are missing school, it’s a sign of challenges that they’re facing, both in the community — lack of transportation, lack of access to healthcare —or in schools — bullying, poor school climates — cause kids not to do well in school, but also cause them to miss more school and fall farther behind.

- HEDY CHANG
Investments in student and family engagement strategies are critical to engage in healthy and meaningful relationships between home and school and promote attendance.

Learnings from Bright Spots

This webinar highlighted EveryDay Labs, Parent Teacher Home Visits, and TalkingPoints. Strategies implemented by these organizations have effectively decreased chronic absence through collaboration with districts, using Elementary and Secondary School Emergency Relief (ESSER) funds provided by the American Rescue Plan (ARP). Panelists included:

- Gina Martinez-Keddy, Parent Teacher Home Visits (PTHV);
- Kari Sullivan Custer, Connecticut State Department of Education;
- Susan Ferguson, Torrington Public Schools (Connecticut);
- Kate Pechacek, TalkingPoints;
- Merecedes Williams, Pittsburgh Public Schools (Pennsylvania); and
- Todd Rogers, Harvard Kennedy School of Government.

Key Takeaways and Strategies

- Utilize models that offer universal supports as well as opportunities to meet the needs of targeted populations with “boots on the ground” efforts (e.g., Connecticut’s use of home visits represents engaging families with the more universal PTHV approach and the Learner Engagement and Attendance Program that targets home visits for the chronically absent).
- Establish sustainable quantitative and qualitative data collection systems to evaluate the impact of programs, knowing that funding is often tied to measurable student outcomes.
- Compensate educators for the investment of their time in building relationships with families (i.e., parent-teacher home visits, training on family engagement best practices).
- Strive to offer relationship-building opportunities to all families. If this is not possible, select a representative sample of students (research shows these practices have a multiplier effect, i.e., parent teacher home visits with just a few students produces positive learning outcomes for all students).
- Build trust and empathy between families and educators so that students know they are loved and supported by the adults in their lives.
- Provide families with easy access to the information they need (i.e., concise messages that are more likely to be read and responded to, personalized, precise, and consistent communication with families about attendance).
- Prioritize inclusive, equitable, and culturally competent forms of communication (i.e., technology and language accessibility factors that impact the messages families receive and how they process them).
- Put everyday tools into the hands of educators, enabling them to communicate with families in authentic, accurate, and immediate ways.
- Focus on engagement. How can you promote a back-and-forth dialogue between educators and families? As an example, the U.S. Department of Education produced Sample Questions Parents and Families Can Ask to Partner with Your Child’s Teachers and School.

Student attendance was very poor, especially in remote learning in our high need districts. Governor Lamont (Connecticut) and our education commissioner saw the need to engage schools and community-based organizations in a common and sustained approach to essentially put boots on the ground and meet families where they are at their home, on their front porch, a park, or local community location to reengage them with school.

Pittsburgh really has focused on that everyday back and forth relationship-building that allows two things to happen. Families learn more about what is happening at school . . . [They] are now able to receive some guidance around how to support their student and how to have academic conversations with students. But teachers are learning about the families, teachers are learning about the students, and they’re learning about the context and the life students are living in.
