

Private School Assessment Information
2017-2018 National Blue Ribbon Schools Program
 Updated November 20, 2018

This information is provided for private schools interested in being nominated for the *National Blue Ribbon Schools Award* by the Council for American Private Education (CAPE) based on the criterion that the school is in the top 15 percent of the schools in the nation in reading and mathematics. Publishers of nationally normed achievement tests have provided “cutoff scores” that define the top 15 percent of schools in each of these two subject areas. The names of these tests and their publishers are

<u>Test Name</u>	<u>Test Publisher</u>
Iowa Assessments (Form E,F,G)	Riverside Publishing
SAT – 10 th Ed (Forms A and D) ¹	Pearson Education
Terra Nova 3 ²	DRC/CTB
SAT 2017 ³	College Board
ACT	ACT
ACT Aspire	ACT
CTP 4	Educational Records Bureau
MAP	NWEA
Performance Series	Scantron
Star	Renaissance Learning

- ¹ The “Student Percentile Equivalent for the 85th School Percentile” provided for each grade in the tables for the SAT – 10th Edition are based on 2002 norms. If a school has student percentile equivalents for this test based on 2007 norms, it should not compare the student percentile equivalent of its mean scale score for each grade to the table values for the “Student Percentile Equivalent for the 85th School Percentile” to determine eligibility. Instead, it should compare its school mean scale scores for each grade with the table values for the “School Mean Scale Score at 85th Percentile of National School Norms.” The school should also report mean scale scores in its application instead of student percentile equivalents.
- ² New norms are available for Terra Nova 3. Cutoff scores based on these norms will be provided as soon as the publisher makes them available.
- ³ The SAT 2017 replaces the previous version of the SAT. The cutoff scores provided for this year are based on Concordance Tables provided by the College Board for converting scale scores on the previous version to scores on the 2017 version.

If your school has student achievement assessment results on one of these nationally normed tests that appear to provide evidence that the school is in the top 15 percent of all schools nationally, review the tables provided below and find the two tables, one for reading and one for mathematics, for that test. Each table contains cutoff scores for each grade in which school norms were available. The cutoff score is the minimum score a school needs to be nominated as being in the top 15 percent of the schools in the nation for that test. Further details about these cutoff scores are provided on the next page.

Mean Scale Scores Corresponding to the 85th Percentile of National School Norms

The top 15 percent of schools are those schools that score at or above the 85th percentile. For the test identified under “Test Name,” the tables below provide

- the average (mean) scale score that corresponds to the 85th percentile in national **school** norms (Column 1), and
- the percentile equivalent of that average scale score in national **student** norms (Column 2)

for each grade in which school norms are available. Note that the Terra Nova 2 scores are given in NCEs, not scale scores.

The cutoff scores provided in Column 1 are provided for only one specific total or composite score in reading and one specific total or composite score in mathematics (look under “Score Name”). These total or composite scores were identified by the publisher as providing the most comprehensive coverage of reading that includes reading comprehension and the most comprehensive coverage of mathematics.

The school should examine its testing results and find the average (mean) scale score in reading and mathematics in each grade tested. If these results **equal or exceed** the average scale score that corresponds to the 85th percentile in national school norms in Column 1 **for both reading and mathematics in every grade** tested in the **most recent year administered**, this will be considered sufficient evidence that the school is in the top 15 percent of all schools nationally.

If the school’s testing results do not include average scale scores, but they do include the national percentile equivalent of the average scale score **based on student norms**, compare these results to the national student percentile equivalent for the 85th school percentile in Column 2. If these results **equal or exceed** the national student percentile equivalent in Column 2 **for both reading and mathematics in every grade** tested in the **most recent year administered**, this will be considered sufficient evidence that the school is in the top 15 percent of all schools nationally. (See footnote for the SAT – 10th Edition on previous page.)

With the exception of the SAT and ACT, whose cutoff scores are based on testing done throughout the school year, and those tests that have cutoff scores for fall and spring norms, the cutoff scores are provided for spring norms. If a school administered a test with only spring cutoff scores during the fall or winter, the school may either use the comparison based on the spring norms or contact the publisher for comparable information based on norms for the appropriate time of year.
