Define **ALIGNMENT** for the purpose of these modules and explain why it is important.

Explain how to **UNPACK A STANDARD** to understand its content.

Use the **ASSESSMENT BLUEPRINT** to document skills.
Alignment

KEY CONCEPTS

**Alignment**

doctorate to which the content of an assessment is aligned with the content of the standards you intend to measure and what you plan to teach in the classroom

**Sources:** Kansas State Department of Education, Assessment Literacy Project; Ohio Department of Education, "Assessment Literacy: Identifying and Developing Valid and Reliable Assessments" (2013).

content

core concepts and procedures in a standard, assessment or assessment item

**Sources:** Kansas State Department of Education, Assessment Literacy Project; Ohio Department of Education, "Assessment Literacy: Identifying and Developing Valid and Reliable Assessments" (2013).
KEY CONCEPTS

Interpret whole-number quotients of whole numbers, (for example, interpret $56 \div 8$ as the number of objects in each share when 56 objects are partitioned equally into 8 shares, or as a number of shares when 56 objects are partitioned into equal shares of 8 objects each). For example, describe a context in which a number of shares or a number of groups can be expressed as $56 \div 8$.

Source: Tennessee Department of Education, "Tennessee’s State Mathematics Standards: Grade 3" (2010).
Solve multistep word problems posed with whole numbers and having whole-number answers using the four operations, including problems in which remainders must be interpreted. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies, including rounding.
KEY CONCEPTS

Solve multistep word problems posed with whole numbers and having whole number answers using the four operations, including problems in which remainders must be interpreted. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies, including rounding.

→ Solve a multistep word problem with whole numbers.
→ Use the four operations.
→ Interpret remainders.
→ Use equations with a letter standing for the unknown quantity.

Alignment
KEY CONCEPTS

Solve multistep word problems posed with whole numbers and having whole-number answers using the four operations, including problems in which remainders must be interpreted. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies, including rounding.

- Solve a multistep word problem with whole numbers.
- Use the four operations.
- Interpret remainders.
- Use equations with a letter standing for the unknown quantity.
- Use mental computation and estimation strategies, including rounding.
KEY CONCEPTS

Interpret whole-number quotients of whole numbers, (for example, interpret 56 ÷ 8 as the number of objects in each share when 56 objects are partitioned equally into 8 shares, or as a number of shares when 56 objects are partitioned into equal shares of 8 objects each). For example, describe a context in which a number of shares or a number of groups can be expressed as 56 ÷ 8.

What is 12 ÷ 5?

2.4 or 2 with a remainder of 2
KEY CONCEPTS
Interpret whole-number quotients of whole numbers, (for example, interpret \(56 \div 8\) as the number of objects in each share when 56 objects are partitioned equally into 8 shares, or as a number of shares when 56 objects are partitioned into equal shares of 8 objects each). For example, describe a context in which a number of shares or a number of groups can be expressed as \(56 \div 8\).

What is \(12 \div 3\)?
What is 12 ÷ 3?

Interpret whole-number quotients of whole numbers.

What is 12 ÷ 3?

Answer: 4

Peter made the statement shown below:

“The number 32 is a multiple of 8. That means all of the factors of 8 are also factors of 32.”

Is Peter’s statement correct? In the space below, use numbers and words to explain why or why not.
KEY CONCEPTS

factor
a whole number you can multiply with another whole number to get a third number

8 x 4

multiple
the result of multiplying a number by a whole number

8 x 4

ALIGNMENT
Peter made the statement shown below:

"The number 32 is a multiple of 8. That means all of the factors of 8 are also factors of 32."

Is Peter’s statement correct? In the space below, use numbers and words to explain why or why not.
Mr. Torres sold a total of 30 boxes of sports cards at his store on Monday. These boxes contained only baseball cards and football cards. Each box contained 25 sports cards. He earned $3 for each sports card he sold. He earned a total of $1,134 from the football cards he sold. What amount of money did Mr. Torres earn from the baseball cards he sold? In the space below, use pictures, numbers and/or words to show how you got your answer.

Solve multistep word problems posed with whole numbers and having whole-number answers using the four operations, including problems in which remainders must be interpreted. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies, including rounding.

**CHECK FOR UNDERSTANDING**

Alignment

How to Unpack a Standard

How to Design Aligned Assessment Items

How to Use the Assessment Blueprint
Alignment

CHECK FOR UNDERSTANDING

Define **ALIGNMENT** for the purpose of these modules and explain why it is important.

Explain how to **UNPACK A STANDARD** to understand its content.

Use the **ASSESSMENT BLUEPRINT** to document skills.

---

CHECK FOR UNDERSTANDING

Assessment Items

---

CHECK FOR UNDERSTANDING

1. Why is alignment critical to a well-designed assessment? What might happen if an assessment item is not aligned in terms of content?

---
CHECK FOR UNDERSTANDING

1. Why is alignment critical to a well-designed assessment? What might happen if an assessment item is not aligned in terms of content?

Alignment is critical to a well-designed assessment because it ensures that an assessment measures what teachers intend it to measure. If the content in an assessment is different from the content in the standards and skills a teacher intends to measure, she may unintentionally measure her students' ability to do something else. For example, if a teacher were to write an assessment item to measure her students' ability to add fractions, she could unintentionally measure her students' advanced reading ability if she uses vocabulary that is well above grade level.

CHECK FOR UNDERSTANDING

2. Consider whether the assessment item is aligned with the content in this writing standard from Hawaii: Create an organizational structure that lists reasons and provide reasons that support the opinion.

Here is the item:

Read the paragraph and complete the task that follows it.

Children should choose their own bedtime. There are things to do, and most have homework. Some people need more sleep, but children like talking to friends. The time to go to bed should be children's decision when they are tired they go to bed earlier. There are activities to go to, so children learn to be responsible.

Rewrite the paragraph by organizing it correctly and adding ideas that support the opinion that is given.

Source: Hawaii Department of Education, "Language Arts Grade 3 Common Core Standards."
2. Consider whether the assessment item is aligned with the content in this writing standard from Hawaii: Create an organizational structure that lists reasons and provide reasons that support the opinion.

Here is the item:

Children should choose their own bedtime. There are things to do, and most have homework. Some people need more sleep, but children like talking to friends. The time to go to bed should be children’s decision when they are tired they go to bed earlier. There are activities to go to, so children learn to be responsible.
Rewrite the paragraph by organizing it correctly and adding ideas that support the opinion that is given.

2. Rewrite the paragraph by organizing it correctly and adding ideas that support the opinion that is given.
The standard includes two skills: The item is well aligned to the standard. The standard includes two skills: Create an organizational structure that lists reasons and provide reasons that support the opinion. The item asks students to reorganize the paragraph, which measures mastery of the first skill. It also asks students to add ideas that support the opinion that is given, which measures mastery of the second skill.

CONCLUSION
